## Projects

---

- **Museum System**

Developed a Java-based museum management system for efficient visitor interactions, encompassing ticket booking, information retrieval, and robust employee functionalities like data management and tour creation. Distinguished by an aesthetically pleasing, entirely Java-coded graphical user interface.

- **AyHa Music Store,**

This project was developed as the final project for database course using JavaFX and SQL database.

- **Home Furniture Store**

I successfully developed a " as part of an online course on web development at Knowledge Academy. This *HTML and CSS* project aimed to provide an introduction to web development and showcased various furniture products with a user-friendly interface.

- **Melodies Music Store**

Web course final project, it's restaurant reservations website that was developed using basic web languages: HTML, CSS, JavaScript and using Bootstrap framework. In the backend: we used PHP and MySQL database.
